FOREWORD

This publication contains recent annual statistics covering most areas of economic activity in Quebec and, generally speaking, draws on the last three years for which data are available. To provide a clearer picture of economic trends in Quebec, we have also given statistics for Ontario and the whole of Canada and, in most cases, shown rates of growth and ratios in the tables. Users interested in other years need only refer to earlier editions of the publication.

For ease of consultation, indicators are grouped alphabetically. Each section contains the data available for that indicator by province, region and metropolitan area, and also details on the various sectors of the economy. In some instances, figures are missing from the tables and this is indicated by a dash, meaning that data are not available, are confidential or, in the case of the Labour Force Survey, amount to less than 4,000. One symbol is used to cover all possibilities so that the tables are not cluttered up with explanatory notes.

Most sections also contain graphs summarizing characteristics and trends as succinctly as possible.

The task of collecting, compiling and presenting the data was carried out by Ms Chantal Nault of Statistical Analysis in the Planning, Analysis and Evaluation Branch of ISTC, Quebec Region.

For further information or explanations of the tables, please contact Chantal Nault (283-7941) or Léonel Plasse (283-2336).
